TASK 1 REPORT

Internship Program — Batch 2026

Submitted By:	Hammad Tahir
Department:	Full Stack Web Development

Date:	28 June 2026

1. Introduction

This report presents the work completed for **Task 1** of the M-Tech Production & Marketing AI/ML Internship Program, Batch 2026. The internship focuses on practical exposure to core concepts in Artificial Intelligence and Machine Learning, equipping interns with skills applicable to real-world technology and marketing challenges.

M-Tech Production & Marketing is a forward-looking company based in Haripur, KPK, specializing in Technology, Training, Marketing, and Projects. The internship is structured in a 9-Phase roadmap designed to progressively build theoretical knowledge and hands-on project experience.

2. Objectives

- Understand the structure, purpose, and expectations of the M-Tech Internship Program 2026 before beginning technical tasks.
- Learn how the internship bridges the gap between university education and real industry practices through daily lectures, mentorship, and hands-on tasks.
- Identify the deliverables expected by the end of the six-week program, including a personal project, contribution to a real-world M-Tech project, and a professional LinkedIn/GitHub portfolio.
- Recognize how AI tools are expected to be integrated into the AI/ML workflow throughout the internship, rather than learned as a separate, isolated skill.

3. Task Description

As the first activity of the M-Tech Internship Program 2026, all interns were required to watch the official orientation session conducted by Mr. Abdullah Sajid, AI Engineer and gold medalist from PAFIAST, who is serving as the mentor for the AI/ML domain. The orientation video was shared by the supervisor through the official M-Tech LinkedIn page, and the task required interns to go beyond passively watching the session: it specifically required liking and sharing the LinkedIn post, posting a thoughtful comment about the domain and expectations from the program, and then preparing a detailed, one-page written report capturing the key points, concepts, and personal understanding gained from the session, rather than a generic acknowledgment of completion.

4. Work Done

- Watched the complete orientation video delivered by mentor Abdullah Sajid, taking notes on the structure, timeline, and expectations of the internship rather than skimming through it.
- Reviewed the session transcript a second time to accurately capture key terminology and details, such as the 9-phase roadmap, the six-week timeline, and the specific completion criteria mentioned by the mentor.
- Completed the LinkedIn task: liked the official M-Tech Internship 2026 orientation post, shared it on a personal LinkedIn profile, and wrote a comment reflecting genuine understanding of the session along with the assigned domain (AI/ML) and expectations from the internship.

- Prepared this written report summarizing the orientation session in the interns' own words, covering the program structure, mentorship model, project pipeline, AI-tool integration philosophy, and portfolio-building requirements explained in the session.

5. Challenges Faced

The supervisor's instructions explicitly discouraged a generic, surface-level submission, which meant going back through the session a second time to genuinely understand concepts such as the 9-phase project roadmap and the AI-tool integration approach, rather than simply marking the task as done after a single viewing.

6. Key Learnings

- The internship is designed around a "Zero to Hero" philosophy, meaning interns from any background can progress from foundational learning to contributing on a real, deployed project, provided they remain consistent.
- The six-week program follows a structured cycle of pre-reading handouts, recorded/live lectures, supervised task implementation, and feedback, with the final two weeks dedicated to contributing to an ongoing M-Tech real-world project such as the university digital-transformation platform or the society management system.
- Using AI tools effectively — including prompt engineering and choosing the right tool for the right task — is treated as a core, mandatory skill for the AI/ML domain rather than an optional add-on, in line with the mentor's point that a person using AI effectively will outperform one who does not use it at all.
- Technical growth alone is not the goal of the internship; building a credible professional portfolio — an active, well-connected LinkedIn profile and a GitHub history of regular, meaningful commits — is treated as equally important and is tracked through concrete weekly metrics.

7. Conclusion

Overall, the orientation session made it clear that the M-Tech Internship 2026 is structured to be more than a formality for fulfilling the 500-hour HEC requirement; it is built as a guided pathway from foundational learning to real-world contribution, supported by daily mentorship, a defined project pipeline, and a deliberate focus on professional portfolio-building. Completing this first task by carefully engaging with the orientation content, rather than treating it as a one-time checkbox, has set a clear baseline of expectations for the AI/ML domain going forward.

Going forward, the focus will be on staying consistent with weekly tasks, maintaining regular GitHub commits and LinkedIn engagement as outlined by the mentor, and actively integrating AI tools into the AI/ML learning workflow rather than treating them as an afterthought.
